FILE!

Air-Fed Incinerator

**MEMORANDUM FOR THE RECORD****SUBJECT: Briefing of Col. Weinbrunner**

1. This morning Col. Weinbrunner, Air Attache, Prague, was briefed on the latest developments in the field of file destruction.  CDS, accompanied him.

25X1

2. I gave Col. Weinbrunner two photographs of the Model 1 Air-Fed Incinerator, one photo of the prototype Model 2 unit, and a copy of the pamphlet on Sodium Nitrate Methods of File Destruction. In addition I explained the following chart to him:

Model No.	O.D.	Ht.	Stack Dia.	Burning Rate (lbs./hr.)	Power Requirements
1	42"	64"	16"	200-500 (E)	220 V, 60 cys, 3 $\phi$ , 7 $\frac{1}{2}$ HP
2	24"	64"	9"	80-130 (E&R)	220 V, 60 cys, 3 $\phi$ , 1 $\frac{1}{2}$ HP
3	(14")	(24")	(4")	5-10 (R)	110 V, 50-60 cycle

3. Col. Weinbrunner said he would like to have a Model 2 Air-Fed Incinerator. It would be placed on the third floor of the Embassy in Prague. As he explained, the space situation is no problem nor is stack diameter. However, he was a little concerned over the need for 220 Volt current. Even though this current is readily available throughout Czechoslovakia he didn't think any was available in the Embassy. Most of the equipment utilizes 110 Volt 50 cycle current. He is going to check on this one point when he returns.

4. In addition to this I gave him information about the M4 Emergency File Destroyer (envelopes of M4<sub>3</sub> in safe) which he requested.
